**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8, 10-13, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by ABB(99/56295), cited on applicant's IDS.

ABB discloses contactor with an electromagnetic drive apparatus, a contact link support (10,12) (showing three contacts), basic appliance (housing) 1, additional appliance 4, extension (6,6a), locking element 9, locking element holder (4-open on upper side, [7,8]-open on both sides), additional switch (p. 5, line 27-31). The extension (6, 6a) is positively guided by the contact link support upon insertion into (11,11a). Concerning the recitation of an auxiliary switch housing is connectable to the switching device, it has been held that the recitation that an element is "capable of" performing a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over ABB, cited above. ABB discloses the claimed invention except for the additional appliance being latched to the basic appliance. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide for a latchable additional appliance, since it has been held that constructing a formerly integral structure in various elements involves only routine skill in the art. *Nerwin v. Erlichman*, 168 USPQ 177, 179.
